

USE-CASE FLOW DOCUMENT

Pharmacy Expiry & Re-order Dispatch Engine

Use Case	Dispense Medicine
Primary Actor	Pharmacy Clerk
Related Use Case	Generate FEFO Dispensing List (included)

Main Success Scenario

1. The pharmacy clerk selects the medicine that needs to be dispensed.
2. The system shows the batches listing batch number, expiry date and quantity that is still in stock.
3. The system creates the FEFO dispensing list and orders the batches from the earliest expiry date to the latest.
4. The system picks the batch that has the valid expiry date for dispensing.
5. The pharmacy clerk confirms the medicine and the quantity that will be dispensed.
6. The system updates the stock quantity for the selected batch after dispensing.
7. The system records the medicine, batch number, quantity and the date and time of the dispensing.
8. The system confirms that the medicine has been successfully dispensed.

Alternate Flow – No Valid Batch Available

1. At Step 3 the system discovers that all available batches are expired or that there is no stock.
2. The system does not pick a batch. Displays a message that the medicine is unavailable.
3. The pharmacy clerk is notified that the medicine cannot be dispensed from the stock.
4. The process ends without changing stock or recording a completed dispensing transaction.

Alternate Flow – Insufficient Quantity

If the selected batch does not have quantity the system displays the available quantity and prompts the clerk to adjust the quantity or to check another valid batch.
